Experiment 13 – Create a virtual machine

Aim

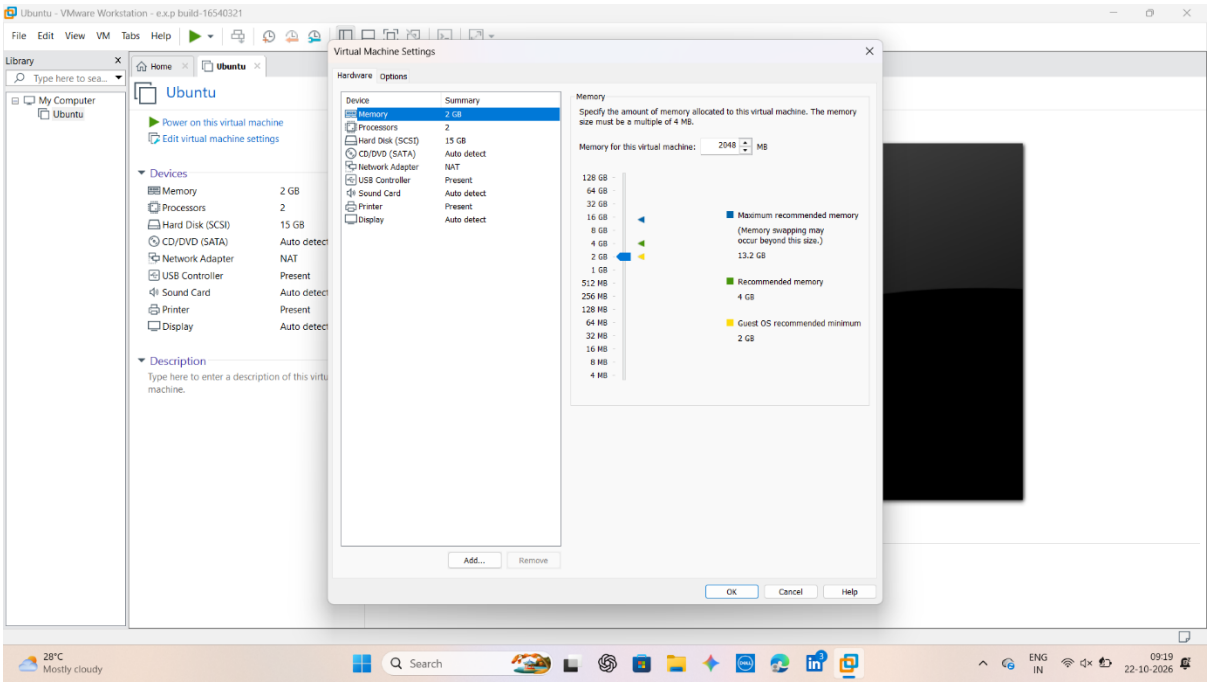

To create a virtual machine with 1 CPU, 2 GB RAM, and 15 GB storage using Type-2 virtualization software.

Requirements

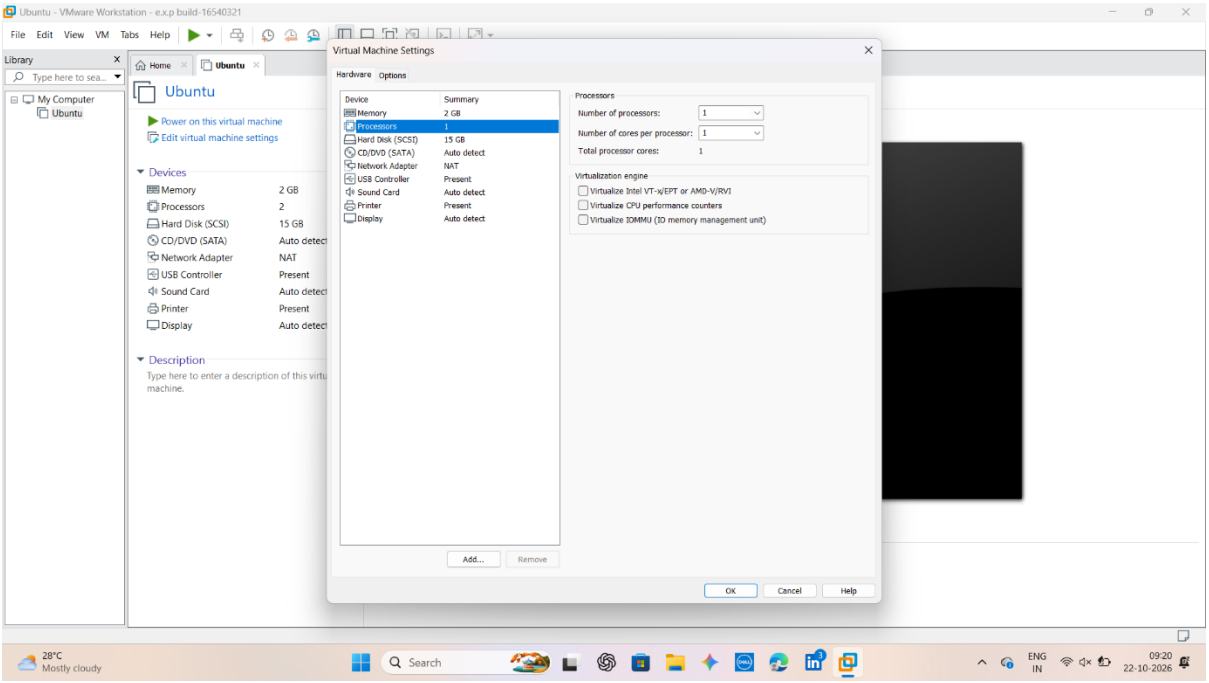

1. Computer or laptop with Windows/Linux.
2. Oracle VirtualBox software.
3. Ubuntu Linux ISO image.
4. Sufficient free disk space.
5. Hardware virtualization enabled in BIOS/UEFI.

Procedure

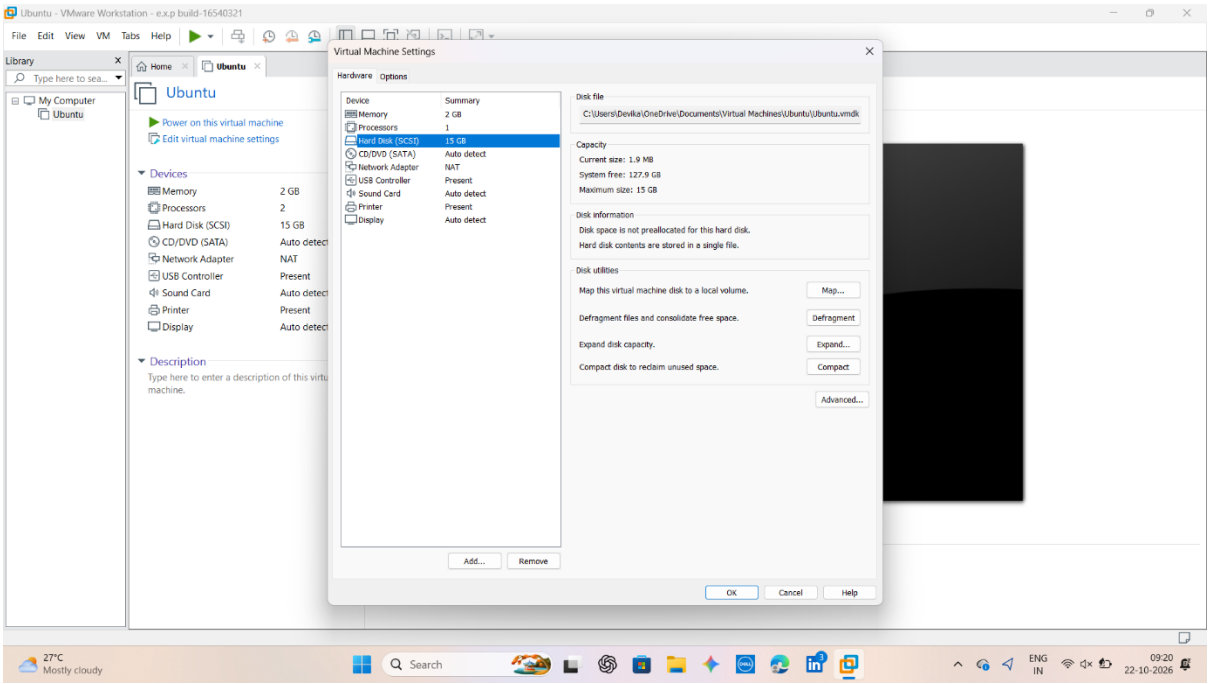

1. Download and install Oracle VirtualBox on the computer.
2. Download the Ubuntu Linux ISO image.
3. Open VirtualBox and click **New**.
4. Enter the virtual machine name as **Ubuntu VM**.
5. Select Linux as the operating system and Ubuntu (64-bit) as the version.
6. Allocate **2048 MB (2 GB) RAM**.

7. Set the number of processors to **1 CPU**.

8. Select **Create a Virtual Hard Disk Now**.
9. Choose VDI as the disk file type.
10. Select Dynamically Allocated storage.
11. Set the virtual hard disk size to **15 GB**.

12. Click **Finish** to create the virtual machine.
13. Verify the CPU, RAM, and storage settings in VirtualBox.

Result

A virtual machine was successfully created using Oracle VirtualBox with **1 CPU, 2 GB RAM, and 15 GB storage**.
