

Library Book Reservation System using Zoho One

Aim

To create a simple **Library Book Reservation System using Zoho One** as a cloud-based SaaS application.

Steps / Procedure

1. Log in to the Zoho One cloud platform.
2. Open Zoho Creator from Zoho One.
3. Create a new application for the SIMATS library.
4. Create a form named **Library Book Reservation**.
5. Add the required fields:
 - Title of the Book
 - Author
 - Publication
 - Year
 - Edition
 - No. of Copies
 - Rack No.
 - Status
6. Select the suitable field type for each field.
7. Arrange the fields properly in the form.
8. Save and publish the form.
9. Enter sample library book details.
10. Submit the form.
11. Check whether the book details are stored in the cloud.
12. Test the form with different book details.

Implementation

Input:

The screenshot shows the 'Library Book Reservation System' interface. On the left is a dark sidebar with the 'Library Book Reservation System' logo and navigation links. The main area contains a form with the following fields: 'title of the book' (text input), 'author' (text input), 'publication' (text input), 'year' (text input with '#####' placeholder), 'edition' (text input), 'no. of copies' (text input with '#####' placeholder), 'rack no.' (text input with '#####' placeholder), and 'status' (radio buttons for 'taken' and 'returned'). A blue 'Submit' button is at the bottom right. The top header includes the system name, a 'Development' tag, device icons, a 'View as' dropdown, a user profile '-MySelf-', and a 'not expires 29 days in' notification.

Output:

The screenshot displays a table titled 'All Library Book Reservation Systems'. The table has columns for 'title of the book', 'author', and 'publication'. The first three rows are: 'Database Management System' by 'Korth' (McGraw-Hill), 'Computer Networks' by 'Andrew S. Tanenbaum' (Pearson), and 'Python Programming' by 'Mark Lutz' (O'Reil). The 'Computer Networks' row is selected. To the right, a modal window shows the details for the selected book, with fields for 'title of the book', 'author', 'publication', 'rack no.', 'year', 'edition', 'no. of copies', and 'status'. The 'status' field is set to 'returned'. Below the modal is a link to 'Add a comment'. The bottom of the table shows 'Showing 3 of 3'.

title of the book	author	publication
Database Management System	Korth	McGraw-Hill
Computer Networks	Andrew S. Tanenbaum	Pearson
Python Programming	Mark Lutz	O'Reil

title of the book	author	publication
Computer Networks	Andrew S. Tanenbaum	Pearson
rack no.	15	
year	2022	
edition	6	
no. of copies	3	
status	returned	

Result

Thus, the **Library Book Reservation System** was successfully created using **Zoho One** and works as a **SaaS application**.
