Experiment 15 – Create a Snapshot of a VM

Aim

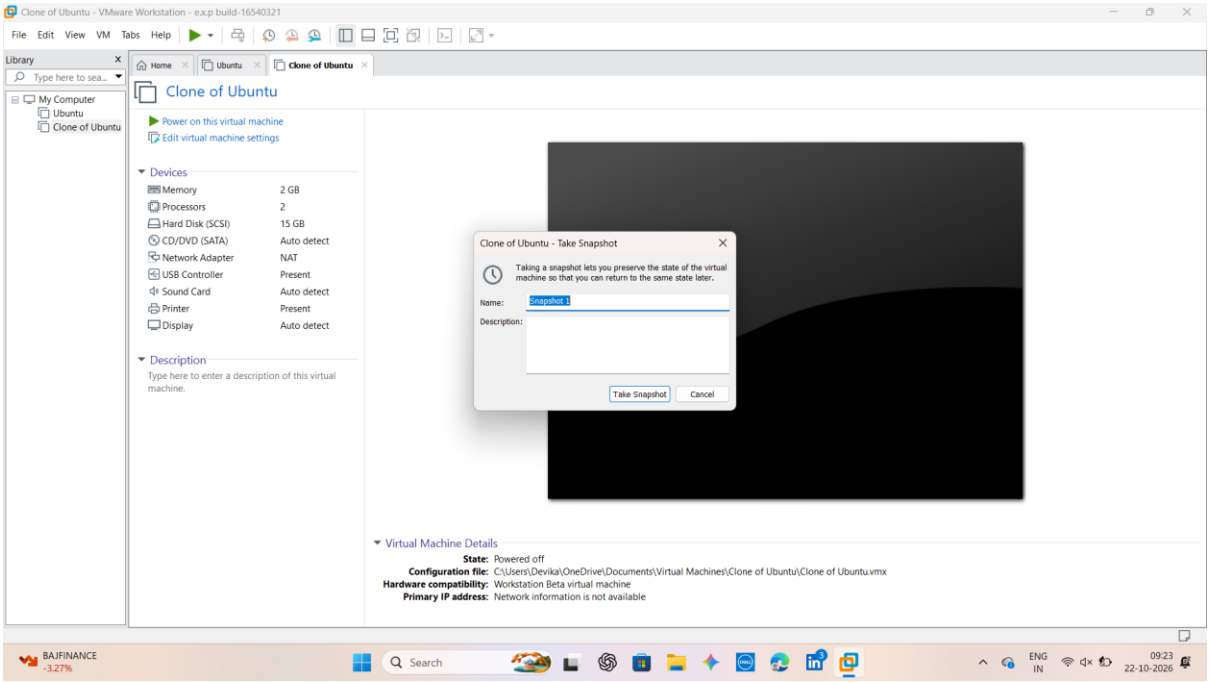

To create a snapshot of a virtual machine using VMware Workstation.

Procedure

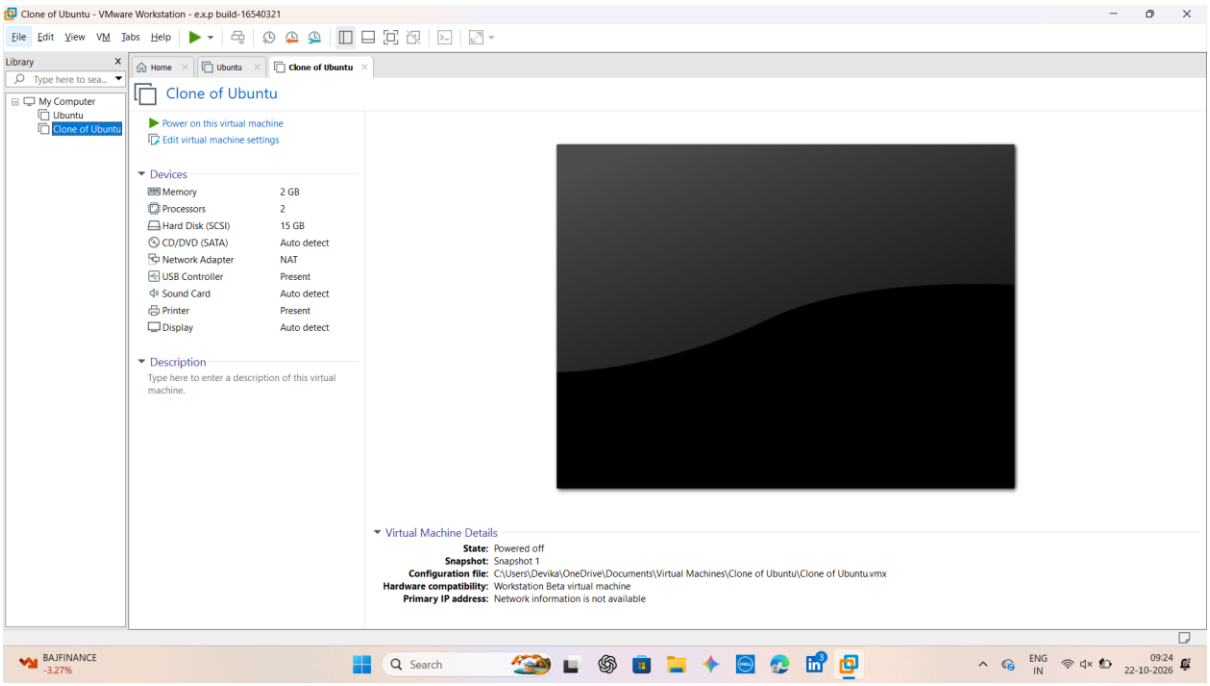

1. Open VMware Workstation.
2. Select the Ubuntu virtual machine.
3. Click Power on this virtual machine.
4. Wait for Ubuntu to start.
5. Click the VM menu at the top.

6. Select Snapshot → Take Snapshot.
7. Enter the snapshot name as Ubuntu_Snapshot.

8. Enter the description as Initial state of Ubuntu VM.
9. Click Take Snapshot.
10. To verify the snapshot, open VM → Snapshot → Snapshot Manager. Check that Ubuntu_Snapshot is listed.

Result

A snapshot named Ubuntu_Snapshot was created successfully in VMware Workstation, allowing the virtual machine to return to its saved state.
