Experiment 16 – Cloning a virtual machine

Aim

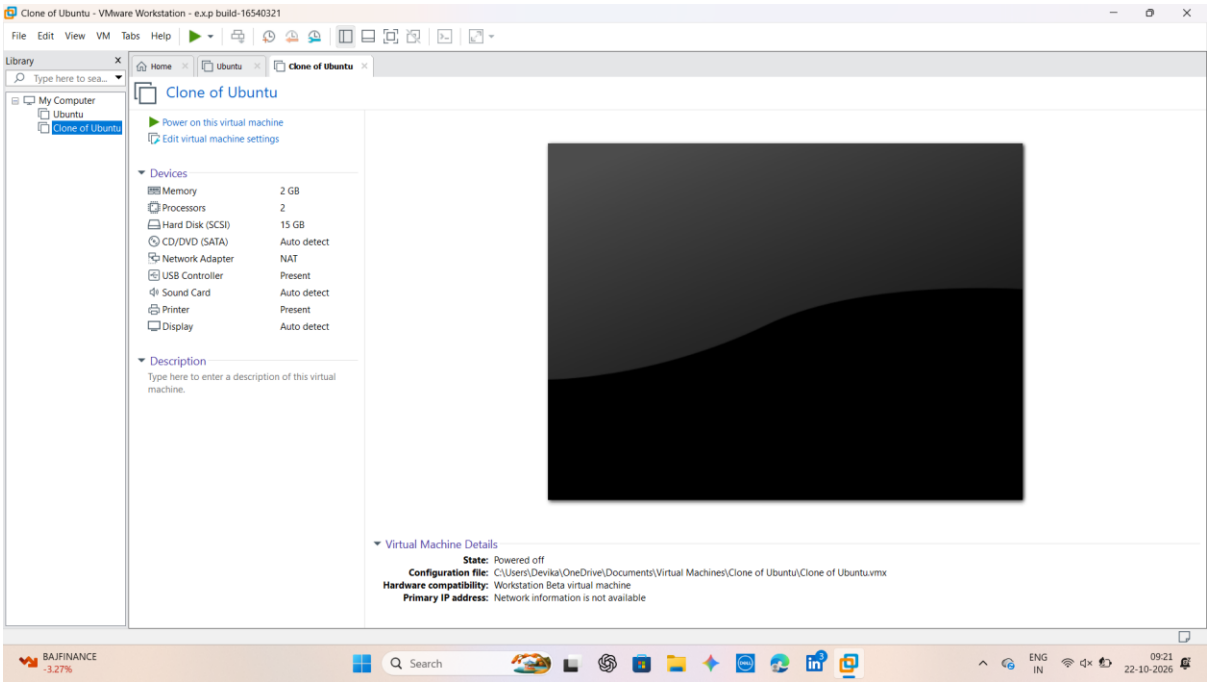

To create a clone of an existing virtual machine using VMware Workstation**.**

Procedure

1. Open VMware Workstation.
2. Select the Ubuntu virtual machine.
3. Power off the virtual machine.
4. Click VM → Manage → Clone.
5. In the Clone Virtual Machine Wizard, click Next.

6. Select The current state in the virtual machine and click Next.
7. Select Create a full clone and click Next.
8. Enter the clone name as Clone of Ubuntu.

9. Select the location to save the cloned VM.
10. Click Finish and wait for the cloning process to complete.
11. Click Close.
12. Select the cloned VM and click Power on this virtual machine to verify that it works.

Result

A clone of the Ubuntu virtual machine was created successfully and tested by powering it on in VMware Workstation.
